- 16 Rescue leaders LFV Group (3)
- 3 Fire Prevention officers LFV Group (1)
- 4 Administration LFV Group
- 4 Fire fighting school (BRS) LFV Group

Bakgrund

I mer än hundra år har Falcks mission varit att förebygga olyckor, sjukdom och nödsituationer, att ge snabb och professionell hjälp åt dem som råkat illa ut samt rehabilitera sjuka och skadade.

Sophus Falck grundade verksamheten 1906.

Falck är organiserat i fyra affärsområden; Assistans, Healthcare, Training och Räddning.

Falck Assistance

The purpose of our services in the Assistance Division is to assure our customers the highest achievable level of safety and security, either by preventing accidents or emergencies from occurring or by providing rapid and competent assistance, if an accident should occur. Our comfort safety and security services are mainly aimed at vehicles, homes, travel assistance and health services.

In 2006, we responded to 800,000 auto assistance calls in Norway, Sweden, Denmark, Estonia and Finland. In the field of mobility, we cover passenger cars, vans, lorries, busses, taxi cabs, trailers, caravans, motor homes, motor-bikes, bicycles and boats. Via Falck Euro-service, we cover our customers' needs for automobile assistance in all of Europe. Outside the Nordic region, we collaborate with a comprehensive network of national and local assistance companies to ensure that our customers get the right assistance and as fast as possible.

Falck Healthcare

Our nurses, doctors, psychologists, physiotherapists, dieticians and other professionals make up a very large and well-coordinated team of specialists. Together they take on the responsibility of ensuring that our patients return to a normal life – or at least to a dignified life.

We currently have 14 modern medical outpatient clinics in Poland and we are planning to increase this number in the future. The doctors, nurses and physiotherapists at the clinics can make diagnoses within a broad range of medical specialities, and they can treat a number of diseases and disorders. The clinics see as many as 75,000 patients a year.

Most of our patients have a subscription paid for by their employer; a smaller number have been referred to us by the public sector. Falck handles a number of healthcare tasks for the public sector, but we especially offer packages targeting employers in the public and private sector and pension funds wanting to ensure the health and well-being of their employees and clients respectively.

Falck Training

Falck is a world leader in rescue and safety courses, especially for staff in the offshore oil/gas sector and in the maritime sector. Also the chemical industry, fire service industry, the aviation industry and military defence units use our competencies and training centres for safety and crisis responds training for their staff.

Each year, more than 100,000 employees, primarily from shipping companies and the oil/gas industry, receive instruction and practical training at our training centres.

At Falck's training centres, we can reconstruct the situation of a rescue operation. Wave machines make up to 1.5 metre high waves, and wind machines can make weather conditions with gale-force winds of up to 30 m/sec. The instructors at Falck's training centres are some of the best in the industry. They usually have experience from the offshore sector, and they are all dedicated to preparing the course attendees for the worst imaginable situation.

Training Centre, Dordrecht

Falck Nutec Training Centre, Rotterdam (Massvlakte)

Falck Emergency

Falck is the largest ambulance operator in Europe and the largest private fire brigade in the world. The ambulance service, fire-fighting activities and patient transport services are organised in our Emergency Division.

Falck provides fire-fighting services in 68 out of the 98 Danish municipalities. Each year, Falck's fire-fighters respond to about 12,000 fires.

Falck considers fire-fighting services for industrial corporations and airports in Europe as a field of potential development and has established such an operation in Spain that focus on fire fighting responds at nuclear plant and petrol-chemical industries.

The clients of the Emergency division are public authorities – the users, i.e. the citizens, do not pay for ambulance services, fire-fighting services or the patient transport services that are covered by the public authorities.

Advantages and Disadvantages

Advantages

No responsibility for employees

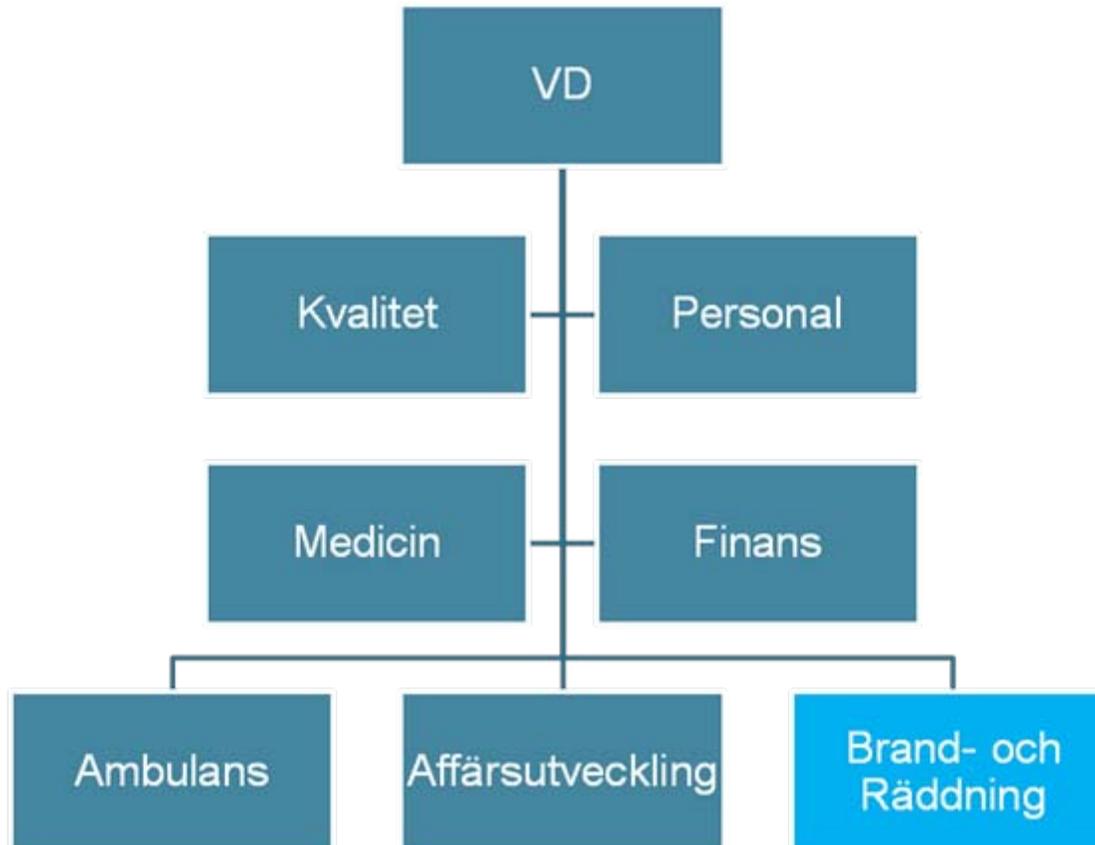

Economy

Disadvantages

Two org. (can be more dynamic)

More time to implement new tasks

Organisation Falck Räddning Sverige

Organisation Arlanda/Bromma
